# Other Projects

- Truck Reliever Routes are under consideration for:
  - Williston
  - Dickinson
  - Watford City
  - New Town
  - Alexander
- Overheight vehicle detection system for the Long X Bridge (planned for 2012).
- Numerous new traffic signals.
- Numerous turn lane projects.
- Numerous road construction (paving) projects.

# Roundabout

How many existing roundabouts  
are in North Dakota?

# Existing Roundabouts in ND

(winter of 2011/2012)

- Fargo = 9
- West Fargo = 2
- Cass County = 1
- Williston = 1
- Bismarck = 1

Parent, if your child is under the age of 18, please read pages 1 through 11.

## ROUNDBABOUTS

A roundabout is a circular intersection where vehicles travel around a center island in a counter-clockwise direction. These intersections are designed to reduce the number and severity of collisions, as well as provide operational efficiencies. When approaching a roundabout, perform the following steps:

1. Reduce your speed.
2. If more than one lane exists, use the left lane to turn left, the right lane to turn right, and all lanes to go through unless directed otherwise by signs and pavement markings.
3. Yield to pedestrians and bicyclists.
4. Yield to circulating traffic when entering the roundabout.
5. Stay in your lane within the roundabout and use your right-turn signal when exiting.
6. Always assume trucks need all available space—do not pass them!
7. Clear the roundabout to allow emergency vehicles to pass and do not enter the roundabout if one is approaching.

## Large Vehicles

Roundabouts are designed to accommodate all vehicle types, including truck and trailer combinations. To assist large trucks, the center island includes an apron to accommodate the rear wheels of the vehicle.

## INTERSTATE DRIVING

Speeds are higher on the Interstate than on city streets. Because of this, your vehicle will travel further during your reaction time. To drive safely on the Interstate, you should:

- Be alert. Use your mirrors so that you know what is behind you as well as what is in front of you.
- When changing lanes, use your turn signals and make sure the lane is clear. When passing, do not cut back into the right lane too quickly.
- Keep to the right if you are traveling slowly.

Mean Reduction (%)	
All Crashes	Injury Crashes
35%	76%

From  
NCHRP Report 672  
Exhibit 5-10

# Why at ND 22 & ND 200?

- To reduce conflict points.
  - Eliminate right angle and left turn crashes.
- Can efficiently handle wide ranges of traffic volumes.
  - Existing entering traffic ~8500 vehicles per day.
  - Can handle up to 17,000 no problem.
  - May be able to handle up to 25,000.
- No signal maintenance.
